C. J. BRAREN

Quality Bread

There is a peculiar something about Barber's Bread that makes it stand out prominently in many homes in this town—it has a tastiness that causes the children and grown ups to marvel at its goodness. The answer is, Quality, and that is because the best wheats and other ingredients of the highest nutrition, combined with modern methods of baking go into every loaf. We serve quite a number of the citizens daily, and we can serve you too. Buy a loaf of our bread today and you will appreciate this. Our cakes and pastries are equally good, and prices are reasonable.

CLARESHOLM LOCAL NEWS

If worried, ask Khaym.

Dr. Mullin is spending a few days in Edmonton this week.

J. Entekpan left for England this week. He was called on by his mother's illness.

Mrs. Breerton and daughter left on Thursday night for Nelson B. C. on a three months' trip.

A. P. Moore of the Union Bank is expected back this week after visiting his old home in Ontario.

Miss Hetherington of Meadow Creek was operated on for appendicitis at Calgary recently and is reported doing well.

The date for "Blind Husbands" has been set for Friday and Saturday, June 11 and 12. This will be one of the big pictures at the Rex Theater.

Mr. and Mrs. J. R. Watt left on Tuesday morning for Scotland. Mrs. Maude Miller will have charge of the office during Mr. Watt's absence.

Inspector Risk of Lethbridge, of the Provincial Police, was in town on Friday greeting his old friends. Ten years ago he ran the livery barn in partnership with Charley James.

"The C. T. C. 'At Home'" which was held in Harrison Hall was enjoyed immensely by those who attended. There were very few but lots of ladies. Refreshments were served and the evening spent with an exceptionally good program and games.

"She wears overalls, rides a donkey, saddles a dog, has a cow, ropes a rooster, makes love, wins love and grabs a fortune. It all happens in Mabel Normand's newest comedy, "The Pest," coming to the Rex next Monday and Tuesday. It's a Golden picture.

Rev. J. Victor Hoovey, district organizer for the Reformed committee, will preach next Sunday morning in the Presbyterian church at 11 o'clock, and in the evening in the Methodist church at 7:30. At the close of the evening service there will be a meeting of all interested in the great temperance question, to organize for the campaign. You are cordially invited.

"The Blinding Trail" is a great picture of the mighty northern forests and a man who takes on almost disastrous turns in cloaking his wife. Struck blind temporarily while, all the time, the right woman stands waiting. Does she win her reward? See Monroe Salisbury, the Mandrel of the screen, and you'll know. Next Friday and Saturday at the Rex.

Monday and Tuesday, May 24 and 25. H. Bryant presents Khaym, the mystery man of India, and his company of mental marvels, including Babette, the juvenile psychic phenomenon. A night of wonderful mystery in interpretation. This company is playing the latter three days of this week at the Grand Theater, Calgary. If you are interested see what the Calgary papers will say about Khaym. It's not a moving picture.

CORRESPONDENCE

Eagle Pass, Texas, May 25.
 The Editor of The Review.

Dear Sir—I had a big offer from the Hearst papers to find and interview Villa, but was turned back one hundred miles south of Pedro Negro, Mexico. Carranza government is going all to pieces. Ninety-ninths of the states of Tamaulipas, Chihuahua and Nueva Leon have gone over to Generals Obregon, Villa, Palais and Collins. All the best people are turning Carranza down.

Uncle Sam has increased his troops to 40,000 on the Rio Grande, and more are coming. We are now facing the biggest revolution we have had since the days of Mademoiselle Diaz. I have had some exciting sport hunting whiskey and ammunition smugglers while attached to K troop of the Texas Rangers. It is very dry in south Texas and the ranchers are afraid of a water and grass famine. I am heading north again and hope to be home June 1st.
 Gustav H. Schoof.

NOTICE

Notice is hereby given that a petition has been presented to the Council of the Town of Clareasholm under the provisions of the Early Closing Act, praying for a renewal of the early closing By-Law No. 137 (already approved by the Lieutenant Governor for the year 1920); and

Notice is hereby further given that objections to the petition presented to the Council praying for the passing of such renewal on the ground that such petition is insufficiently signed or otherwise affecting the validity or sufficiency thereof, must be filed with the Secretary-Treasurer of the Town of Clareasholm on or before the 3rd day of June 1920, and that if no such objections are filed before the said date the Council will proceed forthwith to pass the said renewal to By-Law No. 137.
 W. C. Miller, Secy.-Treas.,
 Town of Clareasholm.

— and this is the greatest surface saver of them all.

LOSS from paint-oglet is vastly greater than the loss of paint protection. But it is to be noted also that the real cost of using ordinary paint—however cheap it may be—is vastly greater than that of painting with a pure and durable paint such as

B-H PAINT "ENGLISH" 70% Pure White Lead (Endorsed by B.H.) 30% Pure White Zinc 100% Pure Paint

If you would avoid constant repainting—if you would have the paint that has maximum covering capacity, investigate the cause of the high reputation attained by B-H. You'll find that the favor in which it is held by so many experienced painters is due to a truly remarkable degree of purity—a purity attained by using such ingredients as the famous Brandram's Grouse B.B. White Lead—combined with pure zinc and the purest linseed we know how to make in our own splendidly-equipped mills. Your investigation will result in a trial of this brand—and that trial will make you a confirmed adherent of this paint that goes so far and that lasts so long. Its film, smooth surface never cracks or peels—the tough, air-tight coat it gives affords the surest kind of surface protection against heat and weather.

Claresholm Local News

If sick, ask Khaym.

Fred Watkins was in Calgary Tuesday and Wednesday.

T. Kingsley's father is visiting in town for a few days.

Richard Andrews of Happy Valley is visiting town this week.

Mrs. John Miller and family left on Tuesday night for a visit to her daughter in Seattle.

Frank Law has purchased Mr. Burton's house on Third avenue and will move his family into it shortly.

Monroe Salisbury in a mighty picture of the frozen north, "The Blinding Trail" comes to the Rex next Friday and Saturday.

W. D. Annable and wife left on Friday for North Dakota to see his sister who is undergoing a serious operation. He expects to be gone about two weeks.

Rev. Howe of Parkland spent a few days in town looking up the committee for the Prohibition campaign. He will preach in the churches next Sunday and organize for the campaign which is expected in July.

The most convincing argument ever used to further the cause of occult science is being presented as a special feature in conjunction with the night of demonstrations presented by Khaym, the Mystery Man of Asia, at the Rex Theater for two days commencing Monday, May 24. Khaym introduces into his offering a series of telegraphic transpositions with Babette Valeria, a nine year old mental marvel. Choosing a committee at random from the audience, Khaym, standing in the aisle of the theater, sends by mental suggestion, thought waves given by members of this committee to the mind of this little miss. This feature of the two hours of mystery will be the most convincing ever seen in this town. It is an amazing idea incorporated into this program of occult research. The convincing feature succeeding another will make Khaym's engagement the sensation of the season.

"The Pest," coming to the Rex next Monday and Tuesday, starring, Mabel Normand as "Pucker," a happy-go-lucky tomboy whose devilish pranks and stunts have marked her as the "Pest" of the village. She is loved by Gene Giles, a struggling young lawyer who beholds a wonderful creature beneath the rag clothes she wears. Following a series of startling situations, in which comedy and laughter run amuck, it is proved that "Pucker" instead of being the humble "goat" and "pest" of the people, is none other than the daughter of a wealthy and socially prominent judge. She was stolen by her infancy by a poor miserable woman named Mrs. Blodgett, who found the chance to exchange her daughter, Blanche, for the child of the judge in order that the Blodgett offspring might be reared in luxury. The haughty Blanche tumbles and comes into her own. See this wonderful comedy story "The Pest," featuring Mabel Normand, at the Rex next Monday and Tuesday.

You don't know? ask Khaym.

Important Notice to Farmers

It is a well established fact that each of the following insects: alfalfa, field peas, alsike clover, red clover, white Dutch clover, white sweet clover, yellow sweet clover, sweet peas, require a particular kind of bacteria to produce the most vigorous growth of stems, leaves, and seed. The bacteria living within the nodules or swellings have the power to gather the free nitrogen of the air and to build it up into nitrogen compounds which are very essential to the growth of the plant and the production of seed. The greater the number of these bacteria that occur within the roots of a plant the more vigorous the plant is.

In order to secure the necessary kind of bacteria in the soil in which a particular kind of legume is to be grown, the inoculation of the seed with a pure culture is recommended. The cultures are usually grown in two ounce bottles, each bottle containing sufficient bacteria to

inoculate sixty pounds of seed full directions are enclosed with each mailing case.

Cultures for the inoculation of the seed of alfalfa, field peas, alsike clover, red clover, white Dutch clover, white sweet clover, yellow sweet clover, crimson clover, and sweet peas may be had by applying to the Principal of the School of Agriculture, Claresholm, Alberta. Applicants should state the number of each kind of culture that is required. The price of each is twenty-five cents per culture.

Lutheran Services

Pentecost, May 23rd: Divine worship in Claresholm at 11 a.m. and in the Clear Lake school at 3 p.m. The Ladies Aid will meet with Mrs. A. Thompson Thursday afternoon, May 26th. You are heartily welcome.

Be Prepared
An Appeal For
Scoutmasters

Ex-Soldiers Are Asked To Offer Their Services in Training the Men of the Future

Comrades in the Service—"To you, who have already proved your patriotism, by serving your country, I want to appeal now for a further step—that is, to train a few boys to be good men for their country, like yourself. You know by sight the Boy Scout, with his bare legs, hat and staff. Well, the Boy Scout Movement, of which I speak, has over 250,000 boys in training now, and the testimonials from public men of every branch of government, army and navy, churches, education, etc., coupled with the constantly increasing calls upon us by the public service for Scouts, prove that we are working on lines that are of national value, and therefore worth our while.

But our numbers and efficiency have been limited during the war by the want of officers in the movement, since seventy per cent. of the men and all our older boys joined up for service.

In spite of this, however, we have been going ahead all the time. The work of training a smart troop of useful enthusiasts is a fascinating game when once you have taken it up—the boys respond so quickly to your ideas.

But it is not only good fun now that the fighting is over. It is the work that a man can do for his country, at a time when juvenile crime is more rampant than it has been, and when, before the nation, there lies a time of danger and change for which we exceptionally sound, well-trained body of citizens are so badly needed.

The real victory of the war lies not so much in superiority on the battlefield as in the ability of our country to keep its end up in the struggle that is upon us.

That's what we are aiming for in training the Scouts to be efficient citizens, without regard to class or creed. The boys everywhere are eager and willing enough. We appeal for men to come and help them in their spare time, on their return to civilian life.

The work is easy and interesting, and is generally carried on in evenings and on half holidays. We are a keen and very happy brotherhood. Will you join us?

You can come for a short time or permanently as you may feel inclined. In any case I shall be very pleased personally to hear from you and will gladly send you further information as to how best you can help.

Your truly,
ROBERT BADEN POWELL.
For further information write to your respective provincial Scout Headquarters.

Western Development

Alberta British Columbia Industrial Congress in June
Speakers representing the largest business interests on this continent and thoroughly familiar with the resources of Western Canada will be heard at the sessions of the Alberta-British Columbia Congress which will be held in these two provinces from June 2 to 10. The management of the congress which will take the form of a tour through Alberta and British Columbia, will visit all important centres, are making preparations for a gathering which will be much larger than ever, any other of the kind held in the West. Every effort is being made to have the delegates see for themselves the possibilities which lie in the undeveloped natural resources of the country and to hear really informative addresses from acknowledged authorities.

It was known to the earliest settlers.

In Defence
Of The Empire

American Writer Tells How Britons Pay the Price

The Saturday Evening Post (Philadelphia) says: "The astounding fact is that today the Union Jack flies over more than one-quarter of the land area of our globe. One has lived in addition the claim that 'Britannia rules the waves'."

I spent a week last September in Devon, the southwest of England, making headquarters at a village inn high up on the wild and desolate country of Dartmoor. Walking one day down a long ancient road we came finally to a tiny and ancient village called Mendoc.

There was a little public house in which the oak table and benches were black and battered with centuries of use, and a village church the stonework of which would indicate it might date back almost to Norman times.

Under a huge live tree in the old churchyard stood a new tombstone in the form of a truncated pyramid. On its side it was cut "Thomas Atkinson, late Sergeant-Major Royal Artillery," who died in November, 1914, aged twenty-two. On the other side of the stone were recorded the death of the old man's four sons. One had been killed in China some years ago, the second in the Boer War in France. The dates of their deaths marked the progress of the war.

They were the men of the first generation of youth. One had fallen in 1916; one the next year; and the last, a man in his late forties, had been killed in action in October, 1918, less than a month before the Armistice.

It was no strain on the imagination that the young men of the first generation were standing about after slaying until, when his last son was killed in Flanders, he, too, gave up the life he had led in Devon.

The village churchyard was written in little for the casual stranger; the whole picture of the country, however, was telling it, one realized that not one man could be called British-born—if he wishes—based on a solid and somber foundation of fact.

Government Ships

To Hudson Bay

Western Provinces Will Insist on Opening Up the Northern Sea Route

In connection with the Government's shipbuilding policy, and a government merchant marine, to which some attention has been devoted in recent issues of this paper, there is one aspect of the whole subject to which, as yet, the authorities at Ottawa have apparently given no consideration, and yet it is one calling for government consideration.

It is the subject of the construction of frigates to be built between Port Nelson, the Hudson Bay terminals of the Hudson Bay Railway, and the open waters of the end ports. These should be built now in order to have them in readiness for the inauguration of a government service of ships in connection with the government-owned railway to the Bay as soon as that is complete.

As the possibility of the construction of a line in a twelvemonth if the government would make up its mind to proceed with the laying of steel on the great coast grade.

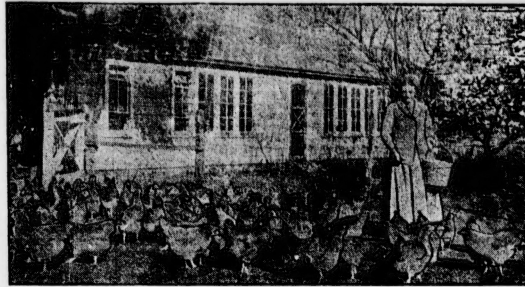

Many people are still skeptical as to the commercial feasibility of the Hudson Bay route, just as many ventures which are now accepted as every day facts, and are commercially successful, were scorned and opposed when first proposed.

It is the duty of the government to construct and place two or three pioneer ships on the coast grade, and thus positively establish to the satisfaction of Canada, east and west, whether the claims made by the West in behalf of the possibility of the construction of the route are well founded, or whether, on the other hand, the critics of the East are right and the Hudson Bay route is wholly impracticable.

The Government is providing shipping services from our St. Lawrence and Pacific ports, and the West approves such a policy, but it also expects, and will demand, that the government likewise provide ships to carry mail and commerce to the great northern inland sea. One thing may be accepted as a positive, unalterable fact, namely, that the Pacific route will never cease their agitation for the operation of the Hudson Bay railway, and the maintenance of an ocean freight service from Port Nelson to Liverpool, unless it is conclusively established by a practical demonstration that such a route cannot be made a commercial success—Regina Leader.

Often a man's character would be unable to recognize his reputation if he were to meet.

Poultry Raising As A Vacation

Although the value of poultry and poultry products in the three prairie provinces have amounted to more than twelve and a half million dollars in 1919, it cannot be said that the poultry industry in these provinces is anything more than a side line with the majority of farmers. The high prices paid for eggs during the last few years, however, has caused farmers to turn their attention to the possibilities of poultry raising as a means of increasing their income.

This is shown by the interest which is being taken in the readings of the agricultural colleges and the Dominion and Provincial Government experimental farms throughout the country. Farmers are looking for advice regarding poultry, and are endeavoring to put into practice the valuable information made available by the agricultural colleges and experimental farms.

The work that is being done at the Dominion Agricultural Farm at Lethbridge, Alberta, is characteristic of what similar institutions throughout the country are doing, and indicates the enormous profit possibilities of poultry raising in the prairie provinces, if the profession is taken seriously. At this farm a return of less than \$50 weekly is being received from the sale of 220 hens which require but part of the time of one man to look after them.

The value of the poultry at the Lethbridge Experimental Farm is measured by the number of eggs a hen lays. Many of the best birds at the farm would not stand very high in the estimation of a judge at a poultry show.

May Establish New Industry

For Canning Its Possible Industry for Southern Alberta

Prairie Canning as an industry is one that offers splendid prospects for the irrigated districts of Southern Alberta, according to a report submitted to the new industry committee of the Lethbridge Board of Trade.

The report reads in part as follows: "It has been demonstrated that garden and field crops can be successfully grown as abundantly as in almost any other country, and especially in our irrigated districts. With our long growing season, so free from spring and summer frosts, the pea crop is nearly always dependable, and there is no reason why a substantial crop cannot be matured each year."

The report goes on to argue that a pea canning industry in this district would be profitable. This would be particularly if the farmers had a direct interest in the business. The history of the pea canning industry in this district is a profitable concern, as the maintenance is inexpensive.

A Real Non-Skid Tire

British Engineer Believes He Has At Last Solved The Problem

Laplace of London has been made to prevent the shattering of rubber tires, but no one device can be said to be completely satisfactory, either in obviating skidding or in avoiding damage to the roadway and to the tire itself. Chains, studs and all sorts of devices have been tried, but without real success. A British engineer has, however, been working along much simpler and more scientific lines, with most promising results. His notion is to shape the tire so that when it is in contact with the road it lies flat with a definite edge on each side. Any undulation is said to be related by the "engineer" action of the tire in this position. Trials have shown that his side-skid tires are quickly checked and that the tire wears well and has no bad effect on road surfaces.

Legions of automobiles have been made to prevent the shattering of rubber tires, but no one device can be said to be completely satisfactory, either in obviating skidding or in avoiding damage to the roadway and to the tire itself. Chains, studs and all sorts of devices have been tried, but without real success. A British engineer has, however, been working along much simpler and more scientific lines, with most promising results. His notion is to shape the tire so that when it is in contact with the road it lies flat with a definite edge on each side. Any undulation is said to be related by the "engineer" action of the tire in this position. Trials have shown that his side-skid tires are quickly checked and that the tire wears well and has no bad effect on road surfaces.

Legions of automobiles have been made to prevent the shattering of rubber tires, but no one device can be said to be completely satisfactory, either in obviating skidding or in avoiding damage to the roadway and to the tire itself. Chains, studs and all sorts of devices have been tried, but without real success. A British engineer has, however, been working along much simpler and more scientific lines, with most promising results. His notion is to shape the tire so that when it is in contact with the road it lies flat with a definite edge on each side. Any undulation is said to be related by the "engineer" action of the tire in this position. Trials have shown that his side-skid tires are quickly checked and that the tire wears well and has no bad effect on road surfaces.

show. But they are egg producers and eggs mean more revenue to the farmer; and it is the object of the experimental farm to teach the farmer methods that will produce more revenue.

The flock which produces satisfactory results has been got together by intelligent selection of the proved laying strains. The birds are barred Plymouth rocks. In 1918 Mr. C. A. Crossfield, who is in charge of the experimental station at Lethbridge, reaped about 150 hens. Of these 44 hens which had laid more than 150 eggs during 1918, included 37 which produced 200 and more, were selected. These were mated with collections of a good egg producing strain, and out of the hatchings of last spring 220 pullets were taken. These 220 birds were divided into flocks of fifty-five each and penned together in the fall. One lot was placed in the pen last October, a month earlier than the usual time.

These fifty-five hens netted a profit of \$1.12 each during the month of December. They laid 1,283 eggs—more than 90 dozen—which were sold wholesale at 90c a dozen. Every hen laid during the month of December at least one egg in the same period. The average number of eggs laid by the pullets in the year during the month was somewhat less than twenty eggs each.

When the industry is not ready until the middle of November, and the results in December were not quite so good as in the one just passed, they were, however, very satisfactory. All but seventeen hens laid one hen laid thirty eggs, yielding a gross return of \$2.20 for the month. This is a good deal more than the cost of its keep, which some farmers are not inclined to get from their hens in the winter months.

These pens were doing much better than in January fourteen dozen eggs were being taken from the four pens daily. This works out at about one hundred dozen eggs a week, and at present prices means a return of \$90 a week from 220 hens.

During the cold weather the hens are given a mixture of two parts of corn and six parts wheat in addition to their other feed which consists of oats, bran, shorts, and cornmeal in equal parts, as well as green alfalfa leaves, grit, oyster shell and charcoal. In warmer weather the corn and wheat ration is reduced. Clean water is always available. The food is given in hoppers which are arranged a few inches from the ground.

It would be interesting to see what results could be obtained in western Canada from specializing in poultry raising on a farm where the greater part of the crop is wheat. The crop would be grown for feeding the poultry. On account of the great variety of eggs that can be grown on a irrigated farm it would seem that these farms offer special advantages to anyone wanting to make poultry his profession, but satisfactory results could also be obtained practically anywhere in the prairie provinces.

The results of the industry are being realized, however, and during the last six months reports have been received of more than a dozen different people who have started, or who have planned to begin poultry raising on a commercial scale.

The more that is written about Allied food and the other legions of the war, the more it becomes apparent that intelligence has a great deal to do with making a successful general. Few was not an officer with much experience of actual fighting, and as a matter of fact his distinction he had won from the excellence of his work at the Hotel de Ville during the war. But for years he had done two things: he had studied military history with the most minute care, and after that had pondered deeply what he had read. He went upon the basis that there must be a reason for everything, and proceeded to search for that reason in military history. As an example, we may take his study of the operation in the war of 1860, doing so, and he found that the British had sought the rule of understanding the majority of tactical and strategical operations, and his thought to make that rule available to future soldiers. One of the most interesting features of Poch's two books is the freedom with which he quotes the British and the German general staff when he seems proper to do so. If we look at the matter impartially, and are willing to judge by results, we must acknowledge the vital importance of the well-educated officer and of an efficient general staff. The study, reading, information and thought required to the direction of military operations are not always recognized by the civilian, nor does he understand how little military men are good soldiers.

Farmers' Income Taxes
That the farmers of Canada have contributed only \$389,011 out of \$53,764,110 collected during the four years the income tax has been in operation was the statement of T. B. Patton, income tax adviser and adviser in an address before the Kansas Club at Regina.

Happiness doesn't live at the end of the road, it's a great, enduring joy with us, ready at our call to share with us our gladiators.

Happiness doesn't live at the end of the road, it's a great, enduring joy with us, ready at our call to share with us our gladiators.

A New Arctic
Trade Route

Steamer Halvar Pioneer Craft in Opening Up New Route of Commerce

A report from Sweden that the Swedish Commercial & Shipping Co. is planning another trading venture next summer in Siberian waters, indicates that the Arctic route, which Capt. Albrecht Ellen took some months ago from Sweden to the mouth of the Ob River and home again, was the pioneer craft in opening up a new route of commerce. It is hardly a route that will attract pleasure travelers, judging by the experience of the small English expedition that accompanied the Halvar, which is said several times to have thought seriously of dropping out because of the great masses of ice that the adventurers encountered. Yet the Halvar, under the command of technical observations have brought his charts of the route up to date, is that a modern steamer can make the trip without much apprehension of serious danger. More than that, he considers that a substantial trade over this Arctic route can be developed in quantity with the Siberian coast, the condition of the Siberian harbors is anything but satisfactory to the navigators. At the Siberian end of the route the trade would tap the grain production of the Omak and Tomsk districts and the metals of the Ural, to say nothing of other Siberian products and the further fact that coal of as good a quality as that of the English east coast, is obtainable in quantity with the Siberian coast, a vessel starting from Sweden could probably load a cargo of almost anything that Sweden produces.

Koreans Will Never
Yield to Japanese

"People Will Not Win for Years. But They Will Never Waive."

Shanghai, June 10.—Koreans will offer no submission before they will liquidate in the rule of Japan, declares Baron Kim Ka-chin, formerly one of Korea's ablest statesmen, who has penetrated the Japanese cordon around Korea. He is now one of the leaders of the little community of Korean refugees who have found haven here in China.

"There can be no peace," he said. "The Koreans will never waive. They may not win for many years, but they will never yield."

He declared that the people are entirely without rights and without political representation. All special privileges are in the hands of the Japanese, he added, and they control all the sources of wealth and rapidly are acquiring actual ownership of the land. The Korean nation, he said, is without a newspaper, for no Korean newspaper editor is permitted to exist, and, he added, the Japanese are not more than three persons, even for social purposes, may gather and talk together," he said. "All the interests of the country are under the direction of Japanese teachers, and the instruction is given in the Japanese language from Japanese textbooks."

He said that the history that is taught to children is garbled in such a way as to glorify Japan and discredit Korea.

"Japan's course," he declared, "has been driving the people out of Korea (from Manchuria) at the rate of 100,000 a year. This is because the Japanese have taken control of everything. They operate the railways, the banks, transportation lines and customs offices, and in those few places where there are Korean officials the Japanese control the country."

"Even the Japanese riksha coolies are favored, for they are permitted to travel free of charge on all railway stations and other places from which the Korean riksha men are barred."

The Nile River
So far only the upper and lower courses of the Nile have been navigable throughout the entire year. The six catamarans, which extend 1,100 miles with long stretches of smooth water between them, will be a part of the Nile being navigable except at very high flood.

British Wireless Telegraphy

Transmit Messages to Aircraft Up to 30 Miles Away

After the signing of the Armistice the British authorities established a postal telephone service to Cologne and in connection with this service, systems use was made of wireless telephony. Frequent use of these stations were placed on the ground at distances of 50 miles from each other, but the use of quite small transmitters was able to transmit messages to aircraft up to 30 miles away. They could also receive from the air to about 30 miles. Frequently these messages were recorded and an aeroplane was in communication at one and the same time with three stations. Considerable small size of apparatus employed, these were remarkable results and testify to the rapid progress made by the British Air Service since the trials of wireless telephony to airplanes in 1915.

Daylight Saving

The Vancouver City council has formally endorsed the principle of daylight saving and will all probably exercise the power of local option in adopting it, despite the legislature's decision to reserve the privilege in that respect at last year.

It was never more before the First Century.

A close student of human nature seldom lends money to his friends.
